

## Assembly Instructions:

Placing shade on base:

1. Place harp onto lamp stand (make sure tip is straight up)
2. Insert lightbulb (not included)
3. Place shade on tip of harp, make sure it is centered inside black plastic bearing of shade.

## Tips:

If lamp is not rotating:

1. Adjust fan blades to a 45° angle. This is the optimal angle for movement. Your fan blades may arrive closed down, to adjust the fan blades bend at the crease.

2. Rub or dab a small amount of any household lubricant, such as; vegetable oil, vaseline, 3 in 1 oil, WD 40, etc. onto the tip of the pin the shade rests on.
3. Placement of the lamp is important also. For optimal effect, keep away from air conditioning vents or places that have drafts.
4. Recommended wattage for the light-bulb is 60 - 75 watts. A lower wattage bulb may prevent the shade from turning. The wattage of the bulb directly effects the speed of the motion.

\* Note: If no movement is desired, close the fan blades.
